# GoLand

How GoLand helps your business

Benefits for you and your business

GoLand is a constantly evolving, state-of-the-art IDE with a deep understanding of the Go language. It is perfectly equipped to help developers stay focused, regardless of whether they're developing modern web applications or DevOps tools.

Making developers productive is a core principle of all JetBrains products. GoLand goes further and proves to be a great asset not only for software engineers, but also for your whole software development business.

It provides the necessary intelligence, code insight, and productivity to give your business a competitive advantage on three organization levels:

- **Benefits for developers**

- **Benefits for project managers**

- **Benefits for business**

Benefits for business

Benefits for project managers

Benefits for developers

These benefits only get better with each new GoLand release. Customer feedback is vital for us, and we actively seek and act upon it. Time and again our customers are amazed at just how quickly we implement their suggestions thanks to flexible approach, short release cycles, many maintenance updates, and stable early access versions of our software.

Benefits for developers

Enjoy IntelliJ Platform

GoLand uses the UI and many features of IntelliJ Platform, which powers IntelliJ IDEA, WebStorm, DataGrip, and other JetBrains IDEs loved by millions of developers.

Go one step ahead

GoLand provides integration with Dep and Go modules, adjusts import statements on-the-fly based on accepted completion suggestions, runs Go tools without switching to the command line, and offers many other capabilities that let developers work with Go more productively and efficiently.

Save time locating and fixing errors

Code inspections detect problematic code and help resolve most of the discovered code issues automatically.

Routine manual tasks – automated

GoLand provides a variety of code generation actions to create boilerplate code instantly. For example, the IDE helps add methods from an interface to a chosen type and create the type right away.

Power of refactorings

A range of refactorings available in GoLand help reduce duplication and keep your project structure neat and clean.

Handy hints and code insights

No more time wasted on switching to other tools or consulting documentation.

Instant project-wide navigation

Developers can jump to any part of their code in a second, thanks to smart navigation and search features.

Handle multi-language projects with ease

In addition to Go, the IDE provides outstanding support for JavaScript, TypeScript, HTML, CSS, Dart, React, SASS, LESS, JSON, and SQL.

Additional functionality

A rich plugin ecosystem includes a wide array of plugins to expand and modify the functionality of your IDE.

Fast and comprehensive support

Detailed documentation and video and text tutorials are available. For any questions a developer may have, they can get quick and helpful email support at any time.

Benefits for project managers

- Have new code developed faster, with higher quality & maintainability and fewer errors.

- Feel confidence in change, as understanding, updating, and refactoring existing code gets easier.

- Eliminate bugs and problems at the early stages and prevent many potential problems in production.

- Keep code standards compliant, organized, and easily discoverable across your team or the whole organization.

- Promote teamwork and improve team management.

- Get on-site training or remote, webinar-based sessions for your team to use the full power of GoLand.

Cost (less is better)

without GoLand

with GoLand

Design   **Implementation**   **Testing**   **Deployment**

Higher code quality eventually reduces maintenance and development costs, as the cost of correcting errors and bugs grows exponentially with the complexity of the product or solution. It is much more cost-effective to fix bugs as early as possible.

For example, a bug discovered during testing may require changes on the design and architecture level, leading to much greater costs. GoLand allows you to reduce the expenses of making changes, and in many cases sharply cuts the incidence of costly errors.

Benefits for business

Remarkable Return On Investment (ROI)

According to our internal research, GoLand
users report a 45% to 70% increase
in their productivity when using GoLand,
in comparison with other IDEs or text editors.

Make your development more cost-effective

Producing higher-quality code with GoLand
means you eradicate a lot of the problems
that require reworking code.

Meet delivery schedules

Help your project managers meet delivery
deadlines by making your developers more
productive.

Utilize your resources more efficiently

Deliver larger projects faster – with the same team size.

Enjoy a flexible licensing policy and bulk discounts

All JetBrains desktop tools are available under a flexible subscription-
based licensing model. You can get a monthly or yearly subscription
for one product or for all tools with the All Products Pack. Every
yearly subscription comes with a perpetual fallback license that allows
you to use a certain version of a product even without an active
subscription. You can qualify for a 20% discount on the initial price
when extending a subscription for the second year, and a 40%
discount for the third year and onwards.

Sales Contacts

JetBrains' award-winning developer tools are trusted by Salesforce, Citibank, Twitter, Hewlett-Packard, Toyota, NASA, and 170,000 other companies worldwide, including 431 on the Fortune 500 list.

If you need any assistance with managing your licenses, selecting a licensing option, or requesting a JetBrains offer, please do not hesitate to contact us.
